

Perform SonarQube on Git

Prompt “My task is specifically setting up SonarQube to analyse any code in the dev branch and fix issues/reduce tech debt Help me on how to do it”

Start with Docker -> `docker run -d --name sonarqube -p 9000:9000 sonarqube:lts-community`

Setup a Password for SonarQube: AISC2013Group2

Then I had to create a configuration for a new server in SonarQube, this required a few things such as the App ID, Client ID/Secret and Private Key

Create a configuration

Configuration name *

Give your configuration a clear and succinct name. This name will be used at project level to identify the correct configured GitHub App for a project.

GitHub API URL *

Example for Github Enterprise:
<https://github.company.com/api/v3>

If using GitHub.com:
<https://api.github.com/>

For security reasons, please make sure to provide the GitHub App private key to update the URL.

You need to install a GitHub App with specific settings and permissions to enable Pull Request Decoration on your Organization or Repository. [Learn More](#)

GitHub App ID *

The App ID is found on your GitHub App's page on GitHub at Settings > Developer Settings > GitHub Apps

Client ID *

The Client ID is found on your GitHub App's page.

Right here there was a problem which the GitHub App asked for a Webhook connected to the internet and for that we would need to create a VM on cloud. Instead we will try using SonarQubeCloud.

To install SonarQube we are going to use it's free tier in

<https://sonarcloud.io/projects/create>

We need to Analyze a new project and for that we needed to install an App. An issue was created on GitHub.

After it's installed we must Select our repo and update the access.

But we got an error that we needed to update the access:

Only the owner could perform changes

On this iteration Bhavik has created the SonarQube application but even after giving the access to the organization I still can't see.

So it was suggested that we try locally only getting data from GIT and not sending and we will try to do that.

Analyze "AISC-T3-Grp2": **snp_a24bcedabf98da375f0dfb5d5b8c3d702be35323**

And the configuration follows:

2

Run analysis on your project

What option best describes your build?

Maven

Gradle

.NET

Other (for JS, TS, Go, Python, PHP, ...)

What is your OS?

Linux

Windows

macOS

Download and unzip the Scanner for Windows

Visit the [official documentation of the Scanner](#) to download the latest version, and add the `bin` directory to the `%PATH%` environment variable

Execute the Scanner

Running a SonarQube analysis is straightforward. You just need to execute the following commands in your project's folder.

```
sonar-scanner.bat -D"sonar.projectKey=AISC-T3-Grp2" -D"sonar.sources=." -D"sonar.host.url=http://localhost:9000" -D"sonar.login=sqp_630fb35ce8ee82cdf57df150949e929e1737179e"
```

Copy

Please visit the [official documentation of the Scanner](#) for more details.

Is my analysis done?

If your analysis is successful, this page will automatically refresh in a few moments.

You can set up Pull Request Decoration under the project settings. To set up analysis with your favorite CI tool, see the tutorials.

Check these useful links while you wait: [Branch Analysis](#), [Pull Request Analysis](#).

So now I am installing SonarQube Scanner locally. And it asked to run the following command to do the analysis:

```
sonar-scanner.bat -D"sonar.projectKey=AISC-T3-Grp2" -D"sonar.sources=." -  
D"sonar.host.url=http://localhost:9000" -  
D"sonar.login=sqp_a24bcdabf98da375f0dfb5d5b8c3d702be35323"
```

```
18:33:36.032 WARN File 'C:\Users\leand\GitHub\AISC-T3-Grp2\AISC2008 - Computer Vision\Case Study 1\aman\dnn_model3.pth'  
is bigger than 20MB and as consequence is removed from the analysis scope.  
18:33:36.074 WARN File 'C:\Users\leand\GitHub\AISC-T3-Grp2\AISC2008 - Computer Vision\Case Study 1\Anjitha\photos_data.  
json' is bigger than 20MB and as consequence is removed from the analysis scope.  
18:33:45.806 INFO 15 files indexed... (last one was AISC2008 - Computer Vision/Case Study 1/Leandro/cnn_model.keras)  
18:33:55.814 INFO 15 files indexed... (last one was AISC2008 - Computer Vision/Case Study 1/Leandro/cnn_model.keras)  
18:34:05.824 INFO 15 files indexed... (last one was AISC2008 - Computer Vision/Case Study 1/Leandro/cnn_model.keras)
```

Okay, after running we got our results!

There's some bugs to solve and we are 1h36 min in debt. There is a lot of duplication which makes sense for the group work.
